

The WideTEK 25-600 is faster, smaller and smarter than its predecessor and the only 25 * 18.5 inch flatbed scanner on the market with an incredibly compact footprint. Its width of 30 inches is only 5 inches wider than the total scan area and the scanner cover is adjustable to open and lock at either 75° or 90°, for ease and comfort during operation. We call this a space saving and effective design.

In addition to its ergonomic design, other features of the WideTEK 25 make it the toughest device on the market. The cutting edge camera technology, consisting of a dust-protected, hermetically sealed camera box holding CCD

systems which use a patented stitching procedure, the WideTEK 25 is built for production environments with a sturdy metal housing, an industrial strength glass plate and removable cover. No cheap plastic housing – industrial design at an affordable price.

Bright white LED illumination guarantees long lifetime and best scan results at a very low noise level. Its compact size and integrated walk-up scanning software make it ideal for reprographics, copy and press clipping services as well as in universities, libraries, and AEC offices.

- ✓ Smallest footprint on the market
- ✓ Long life LED illumination
- ✓ Sturdy industrial housing
- ✓ Compact, ergonomic design suitable for even the smallest office environment
